

# Manufacturing Industry Brief

The global smart manufacturing market size was valued at \$ 215.8 billion in 2019 and is expected to witness a CAGR of 11.8% from 2020 to 2027.

- GrandView Research

To stay competitive, manufacturers must consistently leverage technology to keep up with a changing industry. Manufacturers are looking for ways to optimize document processes to cope with growing records archives and to expand business. They succeed when they effectively manage information while minimizing their downtime, reducing waste, complying with regulations, and operating in a cost-effective manner.

Effective information management is a crucial tool to business success, similar to lean manufacturing practices. Just as you automate processes in the assembly line to save time, money, and maximize profits, you should also automate document processes to save time, gain productivity, enable regulatory compliance, and save money on document management costs. The PaperVision® information management suite provides everything you need in an easy-to-use, quick to implement, and secure application.

## Why Do You Need Enterprise Content Management?

### Managing paper is expensive.

Relying on paper processes presents a multitude of issues, such as loss or theft of documents, time-consuming bottlenecks caused by process overload, and costs associated with managing paper records.

70% of companies who adopt digitization achieve higher productivity than the incumbent firm.

- McKinsey Global Institute (2019)

### Access any document, anywhere, anytime®.

With PaperVision's information management product suite, you can access the information you need in seconds and collaborate with documents securely from anywhere, at any time.

79% of organizations feel that Digital Transformation is important to the future of their organization.

- AIIM (2019)

For small to medium businesses, investing in **content management** returns **\$8.55** in benefits **per dollar spent.**

# Manufacturing Industry Brief

The number of large organizations citing compliance and risk as the largest driver for information management has risen sharply in the past year from 38% to 59%. - AIIIM and View Research

## How does it work?

At Company A, Wanda in Human Resources spends over 20% of her time managing employee certifications. Wanda usually emails each employee individually when their certifications are about to expire, and each employee returns a paper form along with any documentation. Instead of hiring another HR employee to handle the workload, CFO Carrie implemented the PaperVision product suite to streamline operations.

Now, Wanda receives an alert whenever an employee certification is about to expire, and automatically sends the employee instructions and an electronic form to confirm recertification and attach any documentation. Wanda is notified when the employee finishes the task, and is able to easily store documents in the application after review.

Wanda now saves time previously lost to processing certifications and managing paper forms. Instead, she can focus on more beneficial tasks for the organization. Like many other manufacturing organizations, Company A saved almost the cost of a new full-time employee by implementing PaperVision products.

## Implement ECM Quickly and Easily with PaperVision®

### PaperVision® Enterprise Content Management

Whether you prefer managing your documents in the cloud or on-premise, you can achieve easy, efficient, and secure information management with PaperVision.

### PaperVision® Scanning and Capture Solutions

You can't automate what you can't capture! With PaperVision scanning and capture, you can scan your documents from anywhere and automatically capture the data you need from any record.

### PaperVision® WorkFlow and Automation Tools

Launch workflows automatically with PaperVision WorkFlow, or automate tedious tasks like data-entry with Robotic Process Automation (RPA).
