Is Your Bank Ready for Automation?

Digitech Systems' Technology Helps Banks Securely Manage Information with Intelligent Automation

Banks and financial institutions are under pressure to modernize legacy systems while meeting customer expectations and regulatory requirements. Manual, paper-based processes and disconnected platforms slow day-to-day operations while increasing risk and costs. As transaction volumes grow and staffing resources tighten, banks need smarter ways to manage information securely and efficiently.

How do Sys.tm® and the PaperVision® Product Suite Help Banking Organizations?

- Centralize financial documents and data securely.
- Automate manual processes to reduce costs.
- Enable faster, more accurate customer service.
- Enforce compliance and protect sensitive data.

Lower operational costs while increasing scalability:

By digitizing workflows and automating routine processes, banks and financial institutions can scale efficiently while upholding security and regulatory standards. Artificial Intelligence (AI) makes smart records management easier than ever before.

"US banks including JPMorgan Chase and Wells Fargo said artificial intelligence will boost productivity at their companies and allow them to get a lot more done with the same number of employees."[1]

Intelligent Banking Operations Built for Modern Business

Are legacy systems slowing your bank down? With Sys.tm and the PaperVision product suite, you can digitize, manage, store, and route financial information from a single platform. Intelligent automation streamlines operations by leveraging AI to reduce manual work and lower costs while keeping sensitive data secure and compliant.

Centralize Financial Documents and Data Securely.

Are documents scattered across departments and systems? By consolidating financial records into one secure platform, Sys.tm and PaperVision enable teams to manage and share information seamlessly while ensuring strict security controls are consistently upheld.

Automate Manual Processes to Reduce Costs.

Are employees wasting time on manual data entry? AI automates document classification by type and data extraction to eliminate manual effort currently wasted on sorting and typing data. The result is faster, more accurate processing and lower operational costs.

Enable Faster, More Accurate Customer Service.

Are customers waiting too long for answers? Powerful search and system integrations give staff instant access to customer and account information, enabling faster responses and improved customer experiences. AI queries can summarize client information and interactions, so service personnel have a complete picture when assisting clients.

Enforce Compliance and Protect Sensitive Data.

Are regulatory requirements becoming harder to manage? Sys.tm and PaperVision support compliance with virtually any regulation using thoughtful security controls like encryption, access management, and audit trails that protect sensitive customer data at every stage.

"We kept all files in the loan room and it was overflowing at the seams. We simply didn't have any more space, and this was a problem not just in terms of being able to properly store everything we needed to store. We keep other branches' files here. We are the central point of storage, so it became problematic for all."[2]
