

Across

3. Technology that enables computers to understand, interpret, and generate human language
8. Sys.tm tool that uses Robotic Process Automation (RPA) to handle repetitive office tasks
15. AI that can think and learn across many different tasks like a human, but is still in development
17. Microservices allow front-end components to dynamically assemble based on user preferences, pulling only the services needed for each customer
23. While RPA automates specific tasks, _ focuses on automating entire workflows, including multi-step processes across departments
25. Technology that simplifies creating, securing, and working with business information
26. Technology that lets businesses mix and match features they need, while only paying for what they use
29. By isolating features into their own services, developers can build, test, and ship updates without waiting on full-team coordination
30. Allows microservices to be developed, tested, and deployed in isolated, portable environments
31. Software built as one large, unified system with interconnected codebase that's simple to build and hard to change
32. Another name for products built with a microservices architecture, which allows consumers to choose which components they want to use and pay for

Down

1. AI-driven system that extracts data from unstructured documents
2. Benefit of microservices that avoids building unnecessary features
4. Cloud environment dedicated to one organization
5. One of the most widely used types of AI in business. These systems learn by spotting trends and patterns in large data sets
6. Gradually implementing automation in stages
7. Software architecture with separated components that still rely on each other
9. Automation benefit that improves reliability and collaboration
10. ___ merges technologies like AI, machine learning, and Robotic Process Automation to create connected systems that automate even the most intricate processes
11. Cloud computing shared across many organizations
12. ___ is about rethinking how work gets done, connecting people, processes, and information in ways that help your team move faster, stay engaged, and get more done with less stress
13. By using automation for consistency, you will create a _.
14. Another name for products that offer a microservices architecture, allowing consumers to pick and choose from a wide array of small feature bundles
16. Technology that automates repetitive, rule-based business tasks

- 18. A billing model where you pay based on which features you choose and how much each is used
- 19. A modern architectural style where applications are built and offered as small feature bundles rather than giant licensing tiers
- 20. ___ is the use of technology to perform recurring tasks or workflows, significantly reducing manual effort
- 21. Automation tools provided and managed by a third party
- 22. Sys.tm feature that uses AI to understand and extract document information as well as GenAI to create content
- 24. Sys.tm tool for building automated workflows without coding
- 27. The world's only microservices-based information management product. Sys.tm brings business information to life through a customizable feature set that includes artificial intelligence (AI)-based text recognition, text creation through generative AI, process automation, and task automation as well as core document organization, security, and collaboration
- 28. AI designed to perform a single, specific task, like virtual assistants and chatbots. Most AI in use today falls into this category
