

Is Your Business GDPR Compliant?

Leading with Privacy Using Automation and AI

The General Data Protection Regulation (GDPR) requires any company handling the personally identifiable information (PII) of European Union (EU) citizens—no matter where it operates—to implement robust safeguards for sensitive information and keep thorough records of all activity. Businesses must also respond promptly to customer inquiries and ensure that any data breaches are reported without delay. Companies that fail to comply risk fines and their reputations.

How do Sys.tm® and the PaperVision® product suite help businesses meet compliance with GDPR?

- Automatically identify and protect sensitive information.
- Maintain complete audit trails.
- Rapidly respond to data requests.
- Prepare your organization for intensifying privacy concerns.

Stay in compliance while improving efficiency:

You can meet GDPR requirements and streamline operations by using AI and automating routine tasks. This approach allows customer interactions to flow smoothly and facilitates the efficient circulation of documents and PII throughout the organization.

“Compliance in a cloud-first, multi-jurisdictional world—including GDPR—requires continuous vigilance, moving from point-in-time audits to AI- and RPA-driven continuous assurance.”¹

— Omatayo F Salako, CISA

Ensure GDPR Compliance for Your Records and Data

What if you could ensure your organization's records and sensitive data are protected in accordance with GDPR requirements? Sys.tm and the PaperVision product suite make GDPR compliance effortless by embedding security and regulatory processes into everyday operations. Personal data is protected throughout its lifecycle, and responses to data requests occur automatically, without disrupting business workflows.

Automatically Identify and Protect Sensitive Information

Worried that you may not know about all the sensitive information your company has and that some of it may be unprotected? You're not alone! The AI-driven recognition in Sys.tm® Intelligence can automatically identify key data, and you can set up processes that instantly apply appropriate protections. It's one of the simplest ways to ensure GDPR compliance.

Maintain Complete Audit Trails

Struggling to track what's happening with your data? GDPR mandates detailed recording of all document activity. Sys.tm and PaperVision automatically log actions, simplifying audits and regulatory reporting while Robotic Process Automation (RPA) can be used to ensure repetitive compliance tasks run reliably without manual intervention.

Rapidly Respond to Data Requests

Can you locate and delete customer PII instantly? GDPR grants individuals the right to update or erase their data, so you have to respond to these requests. Locating information is quick and easy in Sys.tm and PaperVision, so you'll always be ready to respond, minimizing exposure and risk of fines.

Prepare Your Organization for Intensifying Privacy Concerns

Analysts agree. We should expect more data privacy regulations to emerge from both government and business entities. Will your current systems support seamless compliance in this evolving landscape? Sys.tm's unique microservices architecture enables rapid release of secure new services, so you'll remain ahead of whatever comes next.

“Since GDPR took effect in 2018, regulators have issued billions in fines, and research indicates that nearly 60% of organizations struggle with ongoing compliance due to manual processes and fragmented systems. As a result, many businesses are increasingly relying on AI- and RPA-driven automation to strengthen data governance while enhancing audit readiness and minimizing compliance risk.”²
