Stressed Over HIPAA?

Avoid costly regulatory fines and lawsuits with digital records and automation.

The Health Insurance Portability and Accountability Act of 1996 (HIPAA) is a federal law that requires healthcare providers and companies to keep patient information confidential, secure and readily available. In 2023, more than a dozen healthcare providers paid fines ranging from $3,500 to $875,000 to settle HIPAA enforcement actions[1]. Digital information management systems provide fast secure handling of the information protected by the law.

How does the PaperVision® product suite help healthcare workers better manage patient information?

• Retrieve and securely share records within the HIPAA 30-day access rule.

• Keep Protected Health Information (PHI) secure while in storage or transmission.

• Properly dispose of PHI using automated document retention and destruction schedules.

Stay in compliance while working from anywhere.

Remote workers aren't exempt from HIPAA. Healthcare providers and insurers are required to identify and mitigate security risks associated with off-site access and use of PHI[2].

Information management provides secure access using virtually any device from anywhere, whether on site or providing telehealth services or other duties away from the office.

Integrate securely with EHRs and business applications using PaperVision®.

PaperVision information management integrates seamlessly with Electronic Health Records (EHRs) to give you the control and security over information as required by HIPAA:

• Paper files such as archived patient records (including doctor's notes) and patient letters are safely digitized and added to the PaperVision information management system for organization and storage.

• E-Forms, emails and other electronic documents are collected, organized and stored in the same system.

• Secure information management blocks unauthorized internal and external access and keeps detailed audit trails.

Digital Records Make HIPAA Compliance Easy

What if you could ensure your organizations' medical records and patient information are being protected in accordance with HIPAA regulations? With the PaperVision® suite, you can ensure the confidentiality, integrity, and availability of all your data in one easy-to-use electronic system, making HIPAA compliance a breeze.

Retrieve Records from Anywhere

Is ensuring HIPAA compliance a challenge for your healthcare organization? HIPAA requires organizations to securely and electronically manage, protect, and store patient records. Sys.tm® and ImageSilo® offer cost-effective cloud storage that allows you to easily convert all paper records into electronic files, simplifying HIPAA compliance.

Safeguard Patient Privacy with Advanced End-to-End Security

Are your patient records secure? Under HIPAA regulations, PHI must be electronically protected to ensure the confidentiality and integrity of all patient information. The PaperVision® product suite provides extensive security and encryption settings to ensure patient data remains secure while in transmission and at rest.

Reduce Costly Record-handling Expenses and Penalties

How long does it take your organization to respond to patient requests for information? Under HIPAA, patients can ask for electronic copies of their medical records. With the PaperVision product suite, you can securely share information electronically with external parties, ensuring information requests can be responded to quickly.
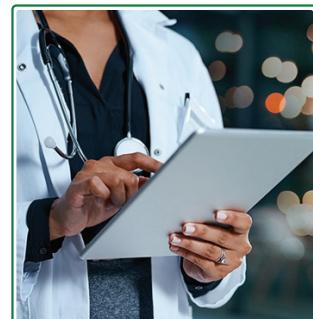

Intelligently Capture PHI

Is your organization still collecting patient information by hand? Manual data entry can be an unsecured and error-prone process, leaving you vulnerable to a HIPAA violation. With PaperVision, you can utilize Intelligent Automation (IA) to automatically extract and index patient records to streamline medical record processing.

Quickly Process Claims

How much time does it take your organization to submit healthcare claims? PaperVision® Capture offers optional business rules that allow you to verify claims against the national database before automatically generating the correct ANSI 837 output to save you time and money when submitting claims for payment.

"With the help of PaperVision® Capture and PaperVision® Enterprise, we're able to ensure the protection of more than 10,000 medical records. Plus, we are better able to comply with HIPAA because vulnerable information is no longer just sitting in drawers. This has saved us more than $259,000 annually!"

-Mary Peelan, Director of Health Information Services, Mental Health Center of Denver
