

# Sick of Paperwork? Time for a Tech Checkup.

**Improve patient care with digital records and automation added to your EHR.**

Struggling to gain control of your digitization efforts? Want to maximize the value? In the healthcare industry, the need has never been greater for intelligent information management tools to compliment your Electronic Health Records (EHR). These tools make it easy to digitize the tons of paper still out there: patient record archives, billing and human resource records. Learn how the PaperVision® suite of products can help you provide better patient care and run a more cost-efficient business.

## **How does the PaperVision® product suite help healthcare workers better manage patient information?**

- Digitize and manage patient and office records electronically and speed information access to improve patient care.
- Improve your efficiency by enabling secure remote access and utilizing workflow approval processes.
- Capture, sort and index outside emails and other information to streamline office operations.

## **Avoid costly HIPAA fines and record management lawsuits.**

Managing your patient records and other information with the PaperVision® product suite helps simplify HIPAA compliance. Respond to patient record requests in seconds, ensure data privacy with encryption, access controls, and multifactor authentication, and disaster-proof patient and office files by managing records in the cloud.

## **Government funding support is available for healthcare providers of any size.**

The U.S. Department of Health and Human Services (HHS) released the 2020-2025 Federal Health IT Strategic Plan that includes goals to promote new technologies that improve access to health information.

# Less Paperwork Means More Time for Patients

You're gaining on digitization but it's hard to keep up, right? You're on data overload. Regulations only add to your stress. To thrive, healthcare providers should focus on “investing in exponential technologies to reduce costs, increase access and improve care” business consultant Deloitte says. The PaperVision suite of products lets you electronically manage everything from patient files to office tasks.

## Improve Patient Care

Get the right information in the right hands at the right time to better guide patient care. PaperVision provides the information management system and tools to easily collect, organize, access and manage a patient's complete health history. Provide patients fast access to all of their health records and billing statements.

## Easily Enable Remote/Hybrid Work

The trend toward remote and hybrid (part-time remote) work will continue, consultants say. Offer employees a way to safely access and manage health records and office data on any device from anywhere. You'll have happier employees and more job candidates.

## Enjoy Savings and Efficiencies

Digitization falling short? Still buried under costly and staff-intensive office paperwork? Automate tasks such as billing. Digitize job applications and patient inquiries at the outset. Avoid regulatory fines by providing patients secure, quickly accessible records.

## Comply with Regulations

Want to avoid big fines for data breaches? Want to capture a bigger share of government funding set aside for healthcare providers? Keep your office in compliance with regulations governing patient privacy, fast record access and other health IT.

## Take Advantage of Government Funding

Don't miss out on government funding opportunities. Be sure to stay up-to-date on annual Notice of Funding Opportunity announcements and apply before their deadlines for a chance to receive financial assistance to upgrade your healthcare information technology.

“Patient records are readily accessible with PaperVision® Enterprise, which helps clinicians make life-saving decisions. We're saving \$437,500 every year in staffing, offsite scanning, and office supply costs, and efficiency throughout the Hospital has greatly improved.”

-Kathy Lavelle, CFO, Woodstock Hospital
